

Problem-Solution Fit

Date	1 October2026
Team ID	6ab224f9f32d8c9d8b2253f9
Project Name	Import data using transform maps
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] Data administrators, ServiceNow developers and business analysts who import spreadsheet data.	6. CUSTOMER LIMITATIONS [CL] EG. BUDGET, DEVICES Limited time for manual cleanup; data only in Excel/CSV files; needs the right ServiceNow roles; limited scripting skills.	5. AVAILABLE SOLUTIONS [AS] PROS & CONS Manual entry: simple but slow and error-prone. Direct file import: quick but fields may not match and duplicates appear. Custom scripts: flexible but need coding.
2. PROBLEMS / PAINS [PR] + ITS FREQUENCY Source columns don't match target fields and duplicate records appear. Happens with every bulk import.	9. PROBLEM ROOT / CAUSE [RC] Source files have a different structure from the target table, and no coalesce or validation is set up.	7. BEHAVIOR [BE] + ITS INTENSITY Admins fix and re-import data and check logs after each run. Intensity is high for large files.
3. TRIGGERS TO ACT [TR] A new batch of records must be loaded, or duplicate or bad data is found in the table.	10. YOUR SOLUTION [SL] Load the file into an Import Set table through a Data Source, then use a Transform Map to map fields to the target table. Set a coalesce field to avoid duplicates, add transform scripts to validate data, and review transform history to confirm the result.	8. CHANNELS OF BEHAVIOR [CH] ONLINE ServiceNow instance: Data Source, Import Set and Transform Map forms.
4. EMOTIONS [EM] BEFORE / AFTER Before: frustrated and anxious about data quality. After: relieved and confident.		OFFLINE Excel/CSV file prepared outside the platform, and team review of the data.
