Team ID	6ab224f9f32d8c9d8b2253f9
Project Name	Import data using transform maps
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	[Paste your GitHub / GitLab or hosted link here]
Programming Language(s)	JavaScript (ServiceNow server-side scripting)
Framework(s) Used	ServiceNow platform (Data Source, Import Set, Transform Map, Glide API)
Key Features Implemented	- Data Source that uploads an Excel/CSV file. - Import Set table that stages the raw rows. - Transform Map with field mappings from the Import Set table to the target table. - Coalesce field to prevent duplicate records. - Transform script (onBefore) to clean and validate data. - Transform history and logs to review errors.
Pending / Incomplete Features	- Scheduled imports for repeat loads. - Email notification when an import has errors.
Setup / Run Instructions	1. Log in to a ServiceNow instance (e.g., a Personal Developer Instance). 2. Create a Data Source and attach the Excel/CSV file. 3. Click Load All Records to fill the Import Set table. 4. Open the Transform Map, check the field mappings and coalesce field, then click Transform. 5. Open Transform History and the target table to check the imported records.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The import setup is saved in an Update Set so it can be moved to another instance.
Invalid rows are skipped and logged instead of stopping the import.
