Project Name	Import data using transform maps
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	
2	README / Setup Guide (instructions to run the project)	
3	requirements.txt / package.json / dependency file	NA
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	
10	Demo video or walkthrough (if required)	

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

/project-root	
/update-set	- Update Set XML with the Data Source, Transform Map and transform script
/sample-data	- Excel/CSV file used for the import
/screenshots	- Transform History and import results
/docs	- Project documents
README.md	- Setup and run instructions

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	
Login Credentials (Demo)	[Provide demo username and password for evaluator access]
Platform / Hosting Provider	ServiceNow Personal Developer Instance (PDI)
Repository Link	
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

A ServiceNow instance (e.g., a Personal Developer Instance) with an admin account, the Update Set file, and the sample Excel/CSV file.

Step 1: Log in to the ServiceNow instance with an admin account.

Step 2: Import the Update Set from XML (System Update Sets > Retrieved Update Sets), then preview and commit it.

Step 3: Open the Data Source, attach the sample Excel/CSV file and click Load All Records.

Step 4: Open the Transform Map and check the field mappings and the coalesce field.

Step 5: Click Transform to run the import.

Step 6: Open Transform History and the target table to check the imported records.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Scheduled imports are not set up yet.	Pending; run the import manually for now.
2	No email notification when an import has errors.	Pending; check Transform History after each run.
3	Files of more than 5,000 rows have not been tested.	Split large files into smaller ones.
