Project Name	Import data using transform maps
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Prepare Data	Stage 2: Map & Import	Stage 3: Validate Data
Actions <i>What does the customer do?</i>	- Collect the Excel/CSV file - Create a Data Source in ServiceNow - Upload the file and load the data	- Create the Transform Map - Map source fields to target fields - Set a coalesce field and run the transform	- Review Import Set rows - Check transform history and error logs - Verify records in the target table
Touchpoint <i>What part of the service do they interact with?</i>	- Data Source form - File attachment upload - Import Set table	- Transform Map form - Field Map related list - Transform history	- Import Set Rows list - Transform history and logs - Target table list view
Customer Thought <i>What is the customer thinking?</i>	"Is the file format correct?" "Are the column names right?" "Will the data load?"	"Are the fields mapped correctly?" "Will duplicates be created?" "Do I need a script for this field?"	"Did all records import?" "Are there errors to fix?" "Is the data accurate?"
Customer Feeling <i>What is the customer feeling?</i>	Hopeful but cautious	Focused, slightly anxious	Relieved if clean, frustrated if errors
Process Ownership <i>Who is in the lead on this?</i>	Data Administrator	ServiceNow Developer / Admin	Data Administrator with Business Analyst
Opportunities <i>How can we improve this stage?</i>	- Provide a standard file template - Check headers before upload - Test with a small sample load	- Auto-map fields with matching names - Use coalesce on a unique field - Reuse transform maps for repeat imports	- Add onBefore scripts to validate data - Set up error notifications - Document fixes for common errors
