

Solution Requirements

Date	1 October 2026
Team ID	6ab224f9f32d8c9d8b2253f9
Project Name	Import data using transform maps
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users log in to the ServiceNow instance (username/password or SSO) before accessing Data Source, Import Set and Transform Map records.	High
2	Authorization levels	Admin / import admin roles create data sources and transform maps and run imports. Business users get read-only access to the target table through ACLs.	High
3	External interfaces	Source data comes from Excel/CSV file attachments (optionally JDBC or REST data sources) and is loaded into an Import Set staging table.	Medium
4	Transactions processing	Data is loaded into the Import Set table, then the Transform Map maps source fields to target table fields and inserts or updates records. A coalesce field prevents duplicates.	High
5	Reporting	Import Set Rows, Transform History and error logs show inserted, updated, skipped and error counts for each import run.	Medium
6	Business rules, etc.	Coalesce on a unique field; transform scripts (e.g., onBefore) clean and validate data; rows with missing mandatory fields are rejected and logged.	High
7	Compliance to laws or regulations	Imported personal data is protected with ACLs and handled per the organization's data privacy policy (e.g., GDPR where applicable).	Medium
8	Other	Transform maps are reusable for repeat imports of the same file format.	Low

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	File data loads into the Import Set table and transforms into the target table within a reasonable time.	Up to 5,000 rows imported in under 5 minutes
2	Scalability	Larger files are handled by splitting them into batches or running scheduled imports.	Supports files of up to 10,000 rows per import
3	Security & Data Privacy	Only authorized roles can run imports; data is protected in transit and by role-based access.	Import roles only; HTTPS (TLS 1.2+)
4	Reliability & Availability	Failed rows are logged without stopping the import, and an import can be re-run without creating duplicates.	100% of errors logged; no duplicates on re-run
5	Usability & Accessibility	Field mappings and error messages are clear in the standard ServiceNow interface.	Standard import set up with no code in the Transform Map
6	Other	Maintainability: transform maps are documented and easy to update.	Each Transform Map has a documented field list
