

Technology Stack

Date	1 October 2026
Team ID	6ab224f9f32d8c9d8b2253f9
Project Name	Import data using transform maps
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	ServiceNow platform UI (forms, lists and Workspace)	Built-in forms and lists let admins create Data Sources and Transform Maps and view Import Sets without building a custom interface.
2	Backend / Server-Side	ServiceNow server-side JavaScript (Glide API and transform scripts)	Transform scripts (e.g., onBefore, onAfter) run on the platform to clean and validate data during the import.
3	Database / Data Storage	ServiceNow instance database (Import Set staging tables and target tables)	Staging tables hold the raw imported rows, and the transform map writes mapped records into the target table.
4	Cloud / Hosting / Deployment	ServiceNow Personal Developer Instance (PDI)	A free cloud-hosted instance that needs no setup, which suits building and testing the import.
5	Version Control & CI/CD	ServiceNow Update Sets	Update Sets capture the Data Source and Transform Map changes so they can be moved between instances.
6	Third-Party APIs / Other Tools	Microsoft Excel / CSV files as the data source	Provides the source data that is uploaded to the Data Source and loaded into the Import Set table.
